

# Developing Security Training

## Market and Opportunity

Nowadays, people are more concern about security. However, software security problems are not easy to spot and prevent. A platform to teach the developers the sense of security and knowledge to prevent any security lootholes should be a trend.

## Problem addressed

- The high cost of training the information security developers
- The lack of a platform for learning and practicing at the same time in information security

## Competitor

- Secure Code Warrior  
[www.securecodewarrior.com](http://www.securecodewarrior.com)

## Stakeholder

- David Jorm (Red Hat)

## what we provide

- Offering the information security developers the relating learning materials ;
- Provide a penetration test environment with a grading system ;

## • what makes our service different

- Offer automatic grading system for penetration test, to see how well you have done.

# Secure your code !

## Our Method and Tools

- Agile Method
- Amazon Web Service (EC2)
- Apache Tomcat Sever
- AJAX, JavaScript, HTML, Java

## Impact of the work

- Enhance developers with offensive skills to identify, exploit and resolve application security vulnerabilities.
- Increasing their security awareness and decreasing chance of being attacked.

## Team members

- Yu Xia
- Lin Zhou
- Runze Liu
- Zongge Ren
